

#### Leveraging Financial Capital Through Data-Driven Asset Management and GIS Applications

February 21, 2024

#### Agenda

- Tee Up: Data Driven Approach
- Asset Management
  - Allan Scott
- Pause for questions
- Geographic Information Systems
  - Randy Olden
- Wrap Up and Questions

#### **AWWA State of Water Industry**

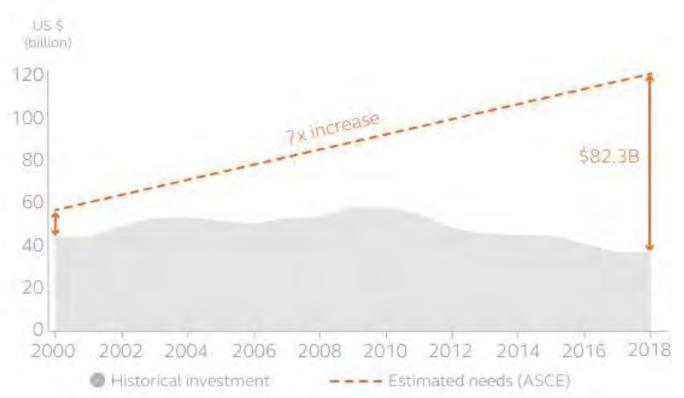

- 26% of utilities are struggling to cover cost of service
- 32% will struggle to cover full cost of service in the future
- No 1. Concern: renewal and replacement of aging infrastructure
- No 2. Concern: financing for improvements
- Honorary mention: workforce turnover/retirements

#### **Mountain County Agencies**

• Very challenging infrastructure to repair and replace!

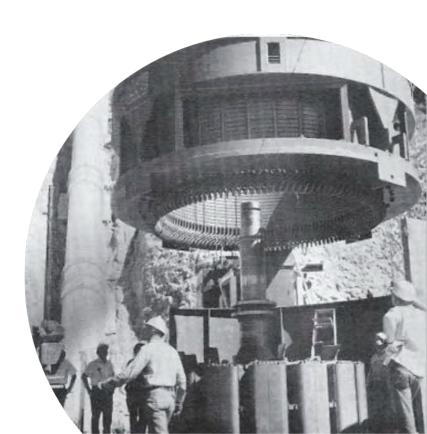

## Water and wastewater capital needs versus historical investment

Sources: American Society of Civil Engineers, U.S. Congressional Budget Office, Bluefield Research

#### Total gap projected to grow to **\$434 billion** by 2029

#### **Traditional Approach**

Focus on Capital Expenditures for repair and replacement

Often lacks Operational Expenditure or Total Expenditure over the asset's lifecycle

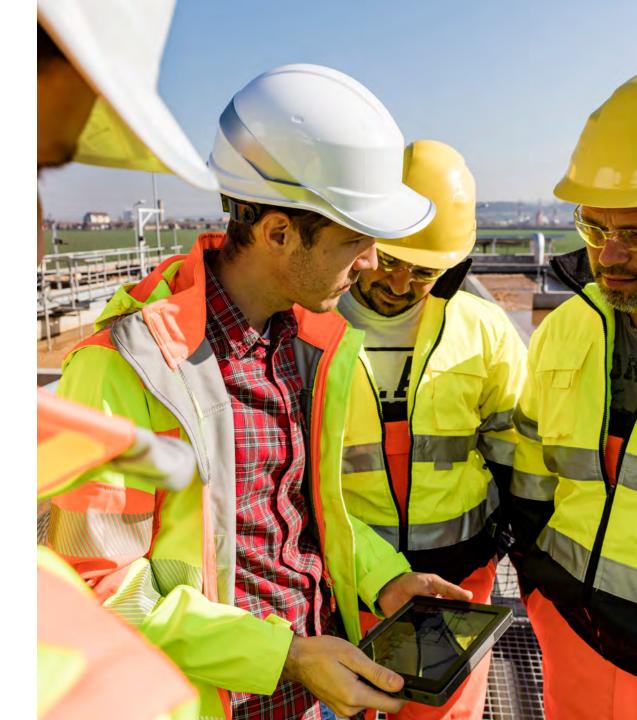

Creates reactive and preventative maintenance approach

- static, time-based
- standard industry assumptions
- mean time to failure

### **Data Driven Approach**

Maximize Value over asset Operating Life

- Emphasizes integration, bringing data from multiple sources to inform maintenance and replacement decisions
- Prioritize risks before infrastructure fails
- Optimize spending decisions, reducing infrastructure funding gap
- Digital asset planning approach have allowed utilities to reduce capital expenditures up to 20%, and save significant O&M energy costs

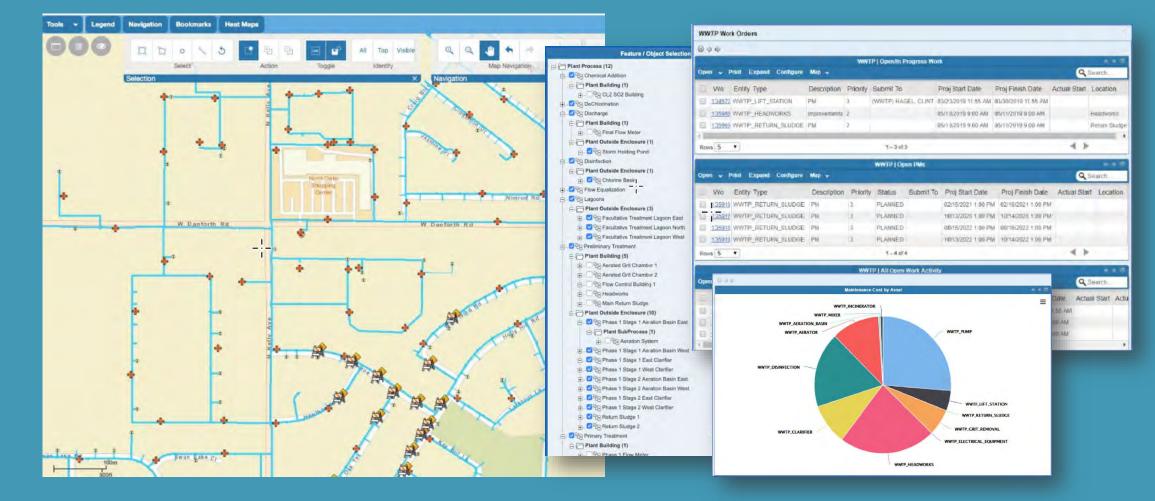

#### Data Driven Approach and Institutional Knowledge

- Estimated 10.6% of water sector workers will retire or transfer each year
- Some expecting half of their workforce to retire in 5 to 10 years
- Recognizes and captures the substantial value that utility workers create for their organizations and customers
- Provides an avenue to improve onboarding, increases knowledge transfer, video training for new hires

#### **Data Driven Approach is Scalable**

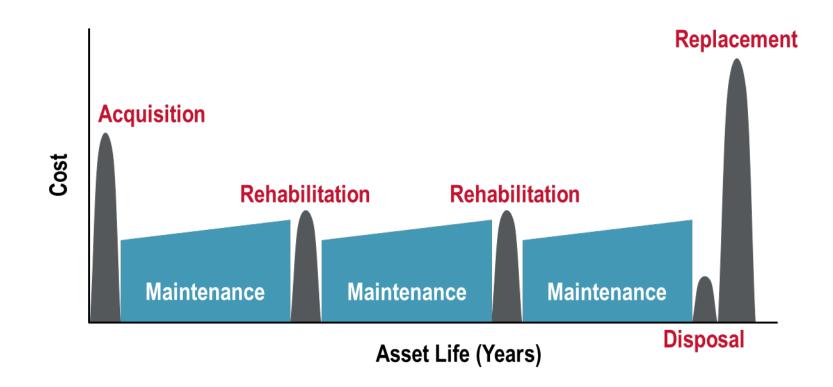

## Asset Management

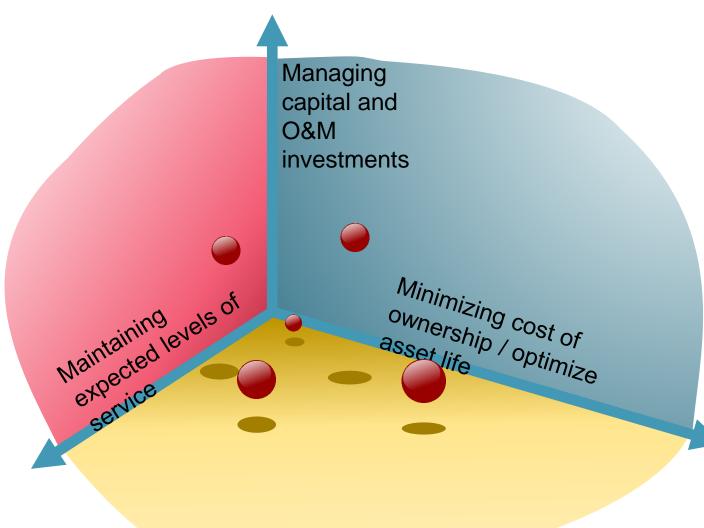

#### **Allan Scott**

#### What is asset management?

Goal of asset investment planning is to minimize lifecycle costs and realize value from the assets

#### What is Asset Management?

AM balances out:

- Investments,
- Cost of ownership
- Maintaining defined levels of service

Level of Service – measure of the quality of service provided:

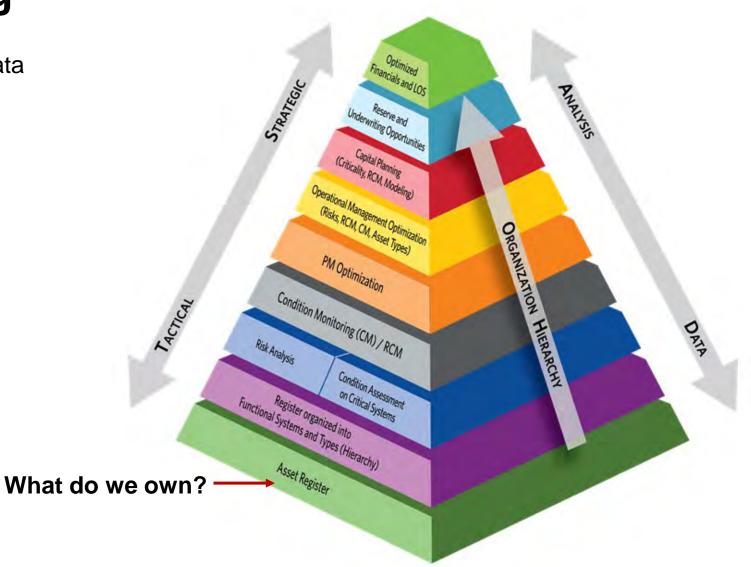

- Minimal water outages
- Minimal sewer overflows
- Treatment capacity
- Pavement condition

Most utilities have thousands of assets of various ages, condition, importance, and cost

## Asset Management provides a framework to organize utility decision-making

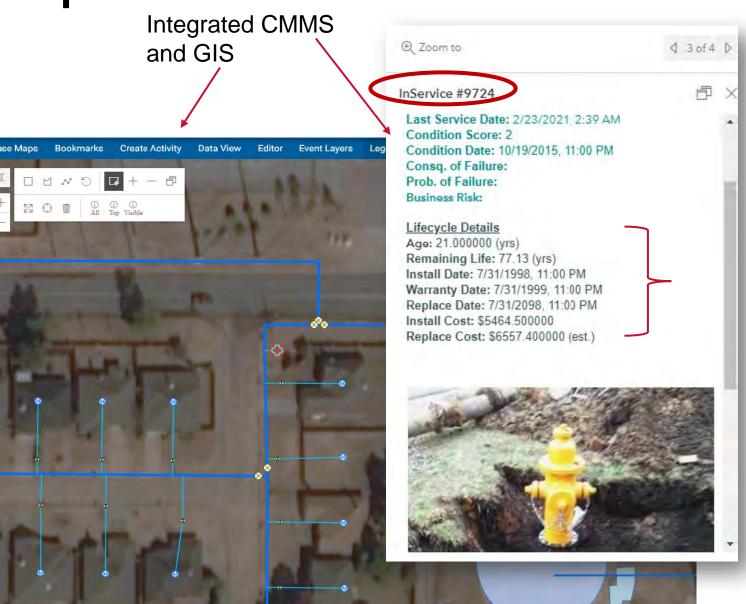

- Make decisions based on measurable data
- Manage risk ties to expected service levels
- Alignment from corporate to field level
- Repeatable processes/sustainable
   programs

Most utilities are doing some form of asset management whether they know it or not Intuitive Quantitative

### **Asset Registry Key Concepts**

- Designate one authoritative source for all managed data
- One standard naming convention
- Only manage data used for analysis and decision-making
- Organize data in a hierarchy or spatially (e.g. map books)
- Build in quality control procedures
- Leverage data investment using mobile technology

#### Asset Hierarchy keeps data organized

- Good for buildings and facilities
- Organized by system/process
- Easy to find equipment
- Supports analysis and reporting
  - Reviewing open work orders
  - Comparing maintenance costs per system

#### **Key Asset Management Success Factors**

#### Create a 'Data-Driven Culture'

- •Everyone has a role and responsibility to maintain accurate and complete data
- •Data should be utilized across the organization
- •Only maintain data that is used by the organization

#### Incorporate transparent, risk-based, data-driven processes

•See the Asset Management Pyramid examples discussed

#### Leverage technology systems (e.g. GIS, CMMS)

•Single source of truth for all asset data

#### Start simple and expand as needed

•Can be phased and scaled to each agency's needs

#### Embraced and supported by Management

Requires organizational changeRequires resourcesRequires staff roles and responsibilities

## Geographic Information Systems Randy Olden

#### ArcGIS

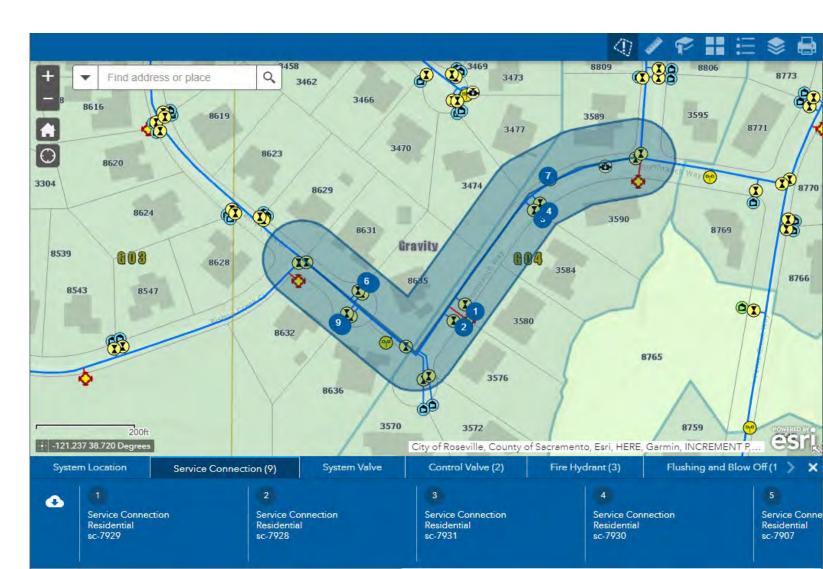

Three Fundamental Systems in One Platform

.

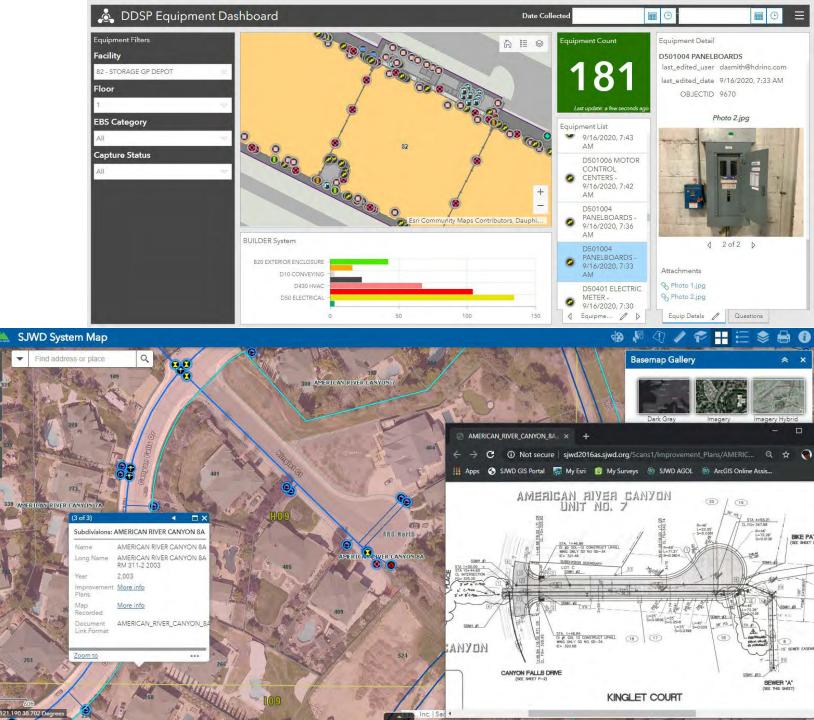

#### **Potential Financial Capital Benefits**

- Knowledge Capture
- Regulatory Reporting
- Planning
- Asset Management
- Constituent Engagement

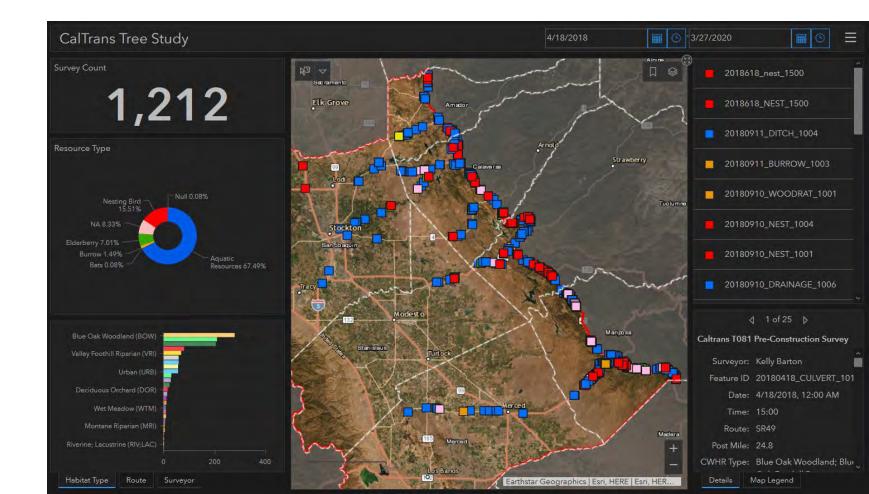

### **Knowledge Capture**

- Mobile data collection
  - Phone or tablet
  - Preconfigured forms
  - Live data feed
- Web app with links to
  - Drawings
  - Maintenance videos
  - Photos
  - CMMS integration

### **Regulatory Reporting**

- Form Automation
- Dashboards
- Interactive Web Apps

#### Planning

- Digital Plan Documents
- Operations
- Equity Analysis
